

Table of Contents

CHAPTER 1

Theory of Flow in Pipe	page
Introduction	1-1
Physical Properties of Fluids	1-2
Viscosity	1-2
Density	1-3
Specific volume	1-3
Specific gravity	1-3
Nature of Flow in Pipe –	
Laminar and Turbulent	1-4
Mean velocity of flow	1-4
Reynolds number	1-4
Hydraulic radius	1-4
General Energy Equation –	
Bernoulli's Theorem	1-5
Measurement of Pressure	1-5
Darcy's Formula –	
General Equation for Flow of Fluids	1-6
Friction factor	1-6
Effect of age and use on pipe friction	1-7
Principles of Compressible Flow in Pipe	1-7
Complete isothermal equation	1-8
Simplified compressible flow –	
gas pipe line formula	1-8
Other commonly used formulas for	
compressible flow in long pipe lines	1-8
Comparison of formulas for	
compressible flow in pipe lines	1-8
Limiting flow of gases and vapors	1-9
Steam – General Discussion	1-10

CHAPTER 3

Formulas and Nomographs for Flow Through Valves, Fittings, and Pipe	page
Introduction	3-1
Summary of Formulas	3-2 to 3-5
Formulas and Nomographs for Liquid Flow	
Velocity	3-6
Reynolds number; friction factor for	
clean steel pipe	3-8
Pressure drop for turbulent flow	3-10
Pressure drop for laminar flow	3-12
Flow through nozzles and orifices	3-14
Formulas and Nomographs for Compressible Flow	
Velocity	3-16
Reynolds number; friction factor for	
clean steel pipe	3-18
Pressure drop	3-20
Simplified flow formula	3-22
Flow through nozzles and orifices	3-26

CHAPTER 2

Flow of Fluids Through Valves and Fittings	page
Introduction	2-1
Types of Valves and Fittings Used in Pipe Systems	2-2
Pressure Drop Chargeable to Valves and Fittings	2-2
Crane Flow Tests	
Description of apparatus used	2-3
Water flow tests	2-4
Steam flow tests	2-5
Relationship of Pressure Drop to Velocity of Flow	2-7
Resistance Coefficient K , Equivalent Length L/D , and Flow Coefficient	2-8
Laminar Flow Conditions	2-11
Contraction and Enlargement	2-11
Valves with Reduced Seats	2-12
Resistance of Bends	2-12
Resistance of Mitre Bends	2-13
Flow Through Nozzles and Orifices	
General data	2-14
Liquid Flow	2-14
Gas and vapor flow	2-14
Maximum flow of compressible	
fluids in a nozzle	2-15
Flow through short tubes	2-15
Discharge of Fluids Through Valves, Fittings, and Pipe	
Liquid flow	2-15
Compressible flow	2-15

CHAPTER 4

Examples of Flow Problems	page
Introduction	4-1
Reynolds Number and Friction Factor for Pipe Other than Steel	4-1
Determination of Valve Resistance in L , L/D , K , and Flow Coefficient C_v	4-2
Check Valves – Determination of Size	4-3
Reduced Port Valves – Velocity and Rate of Discharge	4-3
Laminar Flow in Valves, Fittings, and Pipe	4-4
Pressure Drop and Velocity in Piping Systems	4-6
Pipe Line Flow Problems	4-10
Discharge of Fluids from Piping Systems	4-12
Flow Through Orifice Meters	4-15
Application of Hydraulic Radius to Flow Problems	4-16

APPENDIX A

Physical Properties of Fluids
and Flow Characteristics of
Valves, Fittings, and Pipe

	page
Introduction	A-1
Physical Properties of Fluids	
Viscosity of steam	A-2
Viscosity of water	A-2, A-3
Viscosity of liquid petroleum products	A-3
Viscosity of various liquids	A-4
Viscosity of gases and hydrocarbon vapors	A-5
Viscosity of refrigerant vapors	A-5
Physical properties of water	A-6
Specific gravity - temperature relationship for petroleum oils	A-7
Density and specific gravity of various liquids	A-7
Physical properties of gases	A-8
Steam values of γ	A-9
Density and specific volume of gases and vapors	A-10
Volumetric composition and specific gravity of gaseous fuels	A-12
Properties; saturated steam	A-13
Properties; superheated steam	A-15
Flow Characteristics of Nozzles and Orifices	
Flow coefficient C for nozzles	A-20
Flow coefficient C for square edged orifices	A-20
Net expansion factor Y for compressible flow	A-21
Critical pressure ratio, r_c for compressible flow	A-21
Flow Characteristics of Pipe, Valves, and Fittings	
Net expansion factor Y for compressible flow through pipe to a larger flow area	A-22
Relative roughness of pipe materials and friction factor for complete turbulence	A-23
Friction factors for any type of commercial pipe	A-24
Friction factors for clean commercial steel pipe	A-25
Representative Resistance Coefficients (K) for Valves and Fittings - "K" Factor Table	
Pipe friction factors	A-26
Formulas; contraction and enlargement	A-26
Formulas; reduced port valves and fittings	A-26
Gate, globe and angle valves	A-27
Cheek valves	A-27
Stop-check and foot valves	A-28
Ball and butterfly valves	A-28
Plug valves and cocks	A-29
Bends and fittings	A-29
Pipe entrance and exit	A-29
Equivalent Lengths L and L/D and Resistance Coefficient K Nomograph	A-30

APPENDIX B

Engineering Data

	page
Introduction	B-1
Equivalent Volume and Mass Flow Rates of Compressible Fluids	B-2
Equivalents of Viscosity	
Absolute (Dynamic)	B-3
Kinematic	B-3
Kinematic and Saybolt Universal	B-4
Kinematic and Saybolt Furol	B-4
Kinematic, Saybolt Universal, Saybolt Furol, and Absolute	B-5
Saybolt Universal Viscosity Chart	B-6
Equivalents of Degrees API, Degrees Baumé, Specific Gravity, and Density	B-7
International System of Units (SI)	B-8
Conversion Equivalents	
Length	B-10
Area	B-10
Volume	B-10
Liquid Measure	B-10
Velocity	B-11
Mass	B-11
Mass Flow Rate	B-11
Volumetric Rate of Flow	B-11
Force	B-11
Pressure and Liquid Head	B-12
Energy, Work, Heat	B-12
Power	B-12
Flow Through Schedule 40 Steel Pipe	
Water	B-13, B-15
Air	B-14, B-15
Commercial Steel Pipe Data	
Schedules 10 to 160	B-16
Standard, extra strong, and double extra strong	B-17
Stainless Steel Pipe Data	B-18
Commercial Steel Pipe Data	
ISO 336 and BS 3600	B-19
Power required for Pumping	B-21
Fahrenheit - Celsius Temperature Conversion	B-22
MISCELLANEOUS	
	page
Illustrations of Typical Valves	
Globe, angle, and stop-check	A-18
Lift and swing check	2-7 and A-18
Tilting disc check and foot	A-19
Gate, ball, and butterfly	A-19
Cocks	A-19
Bibliography	see second page of book
Foreword	see third page of book
Nomenclature	see next page
